Follow the story of the villagers that build their own town, fight for survival against the island's harsh environment and discover their secrets. Setting Isola dei Ciclopi ("Island of Cyclops") is a fictional island that can be found in the middle of the Mediterranean Sea, in a small archipelago of Italian coastal islands known as the Tuscan Archipelago. It is a volcanic island, located in a regional park of the same name, near Porto Fino. The island is inhabited by a unique community of humanoids that use a base of stone and rock to construct their ancient town. Its territory is surrounded by a large marshland, where most of the islanders' livelihood is dependent on and oriented towards the preservation of its ecosystem. Most of the island's population works at one of two local farms, that also act as sources of food, medicine and a variety of artisanal products. Isola is a tourist destination, and its main attractions are its natural wonders: its lush coastal vegetation and its diverse marine life. The island's

coast is dotted with rocky promontories, where the locals like to spend their weekends. The island's population has grown and kept its traditions and culture, because of the exuberant relationship with the ocean and the non-intrusive administration of the park. Content Isola dei Ciclopi's landmass is comprised of three main sections, Isola di Mauro, Isola di Carmelo and Isola di Pasqua. Each section has a different climate and vegetation, and has an interesting and unique ecosystem. The island has a relatively calm northern side, where the vegetation is abundant and it receives high sunlight. The side has many freshwater springs that feed the marshland surrounding the island. This part of the island's terrain is commonly known as the "provincia" ("province"). It is in this area that the main construction of the island takes place. This province consists of small villages and small hilltops. The northern side has a strong connection with nature, its residents are generally subsistence farmers, and their traditions are deeply intertwined with the sea. The Province is inhabited by a community of Cyclops, a miscellaneous humanoid race of a few meters tall that has retained many of the traits of its common ancestor, the Anzati (Borini, 2008). Their main attraction is their overwhelming ambition, and their wish to better their own position in the society. 82157476af
